DIRECTIONS: Solve the word problems.

Sam was watching ants on the ground. He counted eight hundred and seventy-two (872) and then four (4) stragglers. How many in all?

$$872 + 4 = 876$$

Along a lakeshore there was a swarm of flies. The main swarm had one hundred and twenty-three (123) flies. There were six (6) in another. How many in all?

$$123 + 6 = \square$$

What if someone asked you to add seven hundred and fifteen (715) with four (4)? What would the total be?

$$715 + \square = \square$$

Imagine counting two hundred and sixteen (216) stars and then another one (1) star. How many were counted?

$$\square + \square = \square$$

Bob ordered a toy. It took four hundred and fifty-five days for the order and four (4) days for mailing. How many days until he got the toy?

$$\square + \square = \square$$

Stacey bought a field full of flowers. The main part had six hundred and forty-three tulips and the other part had six roses. How many flowers in all?

$$\square + \square = \square$$
